Microsoft STUDY4 Build School

Azure IoT Hub在IND 4.0的應用策略

Carl Yang

Kingston Senior Engineer

Challenges

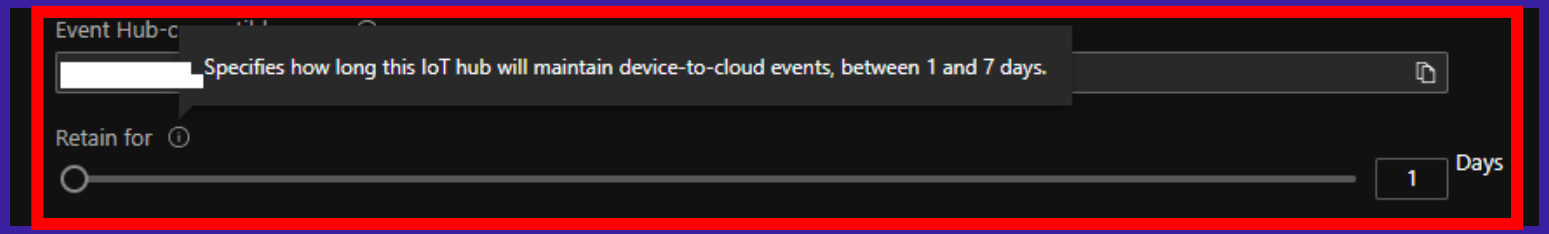
- 多樣化的資料來源
- 不一致的資料格式
- 網路通訊的難易度
- 龐大的資料量

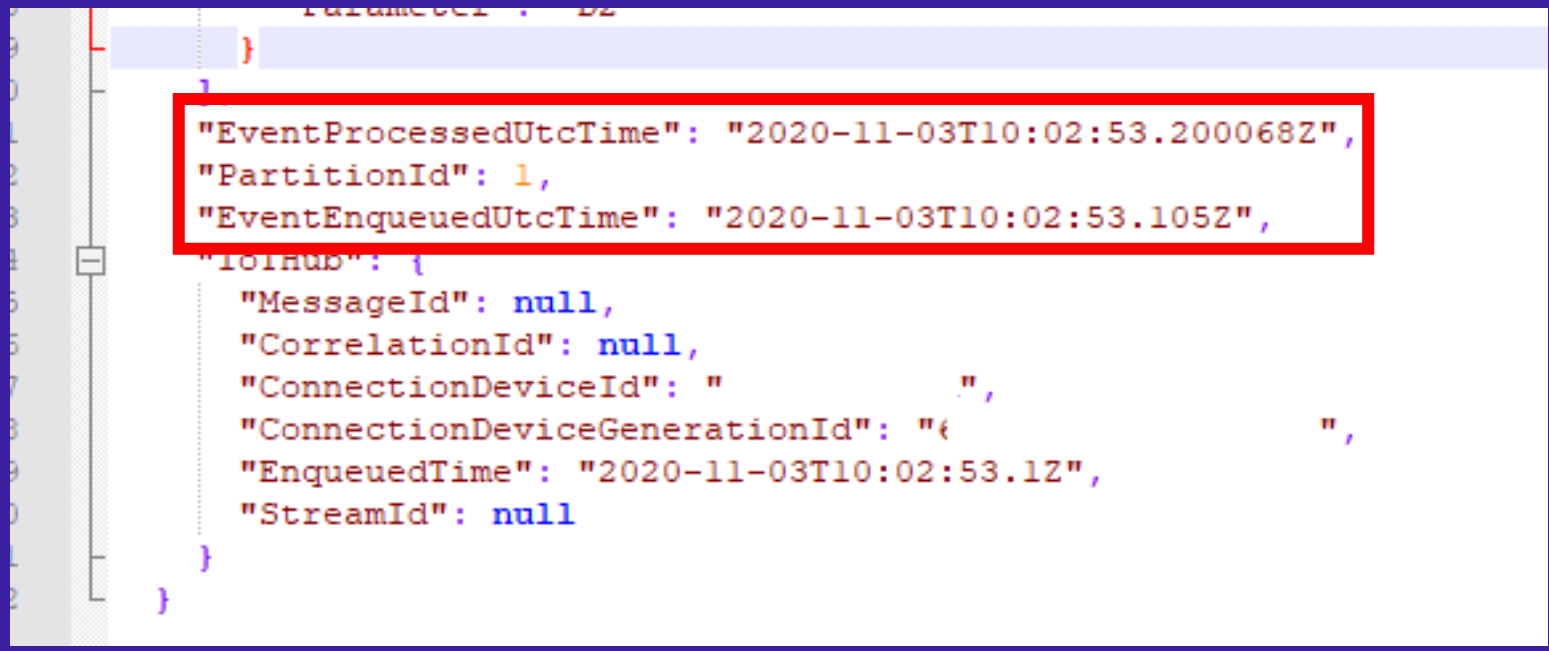
Microsoft STUDY4 Build School

Azure IoT Hub

Telemetry

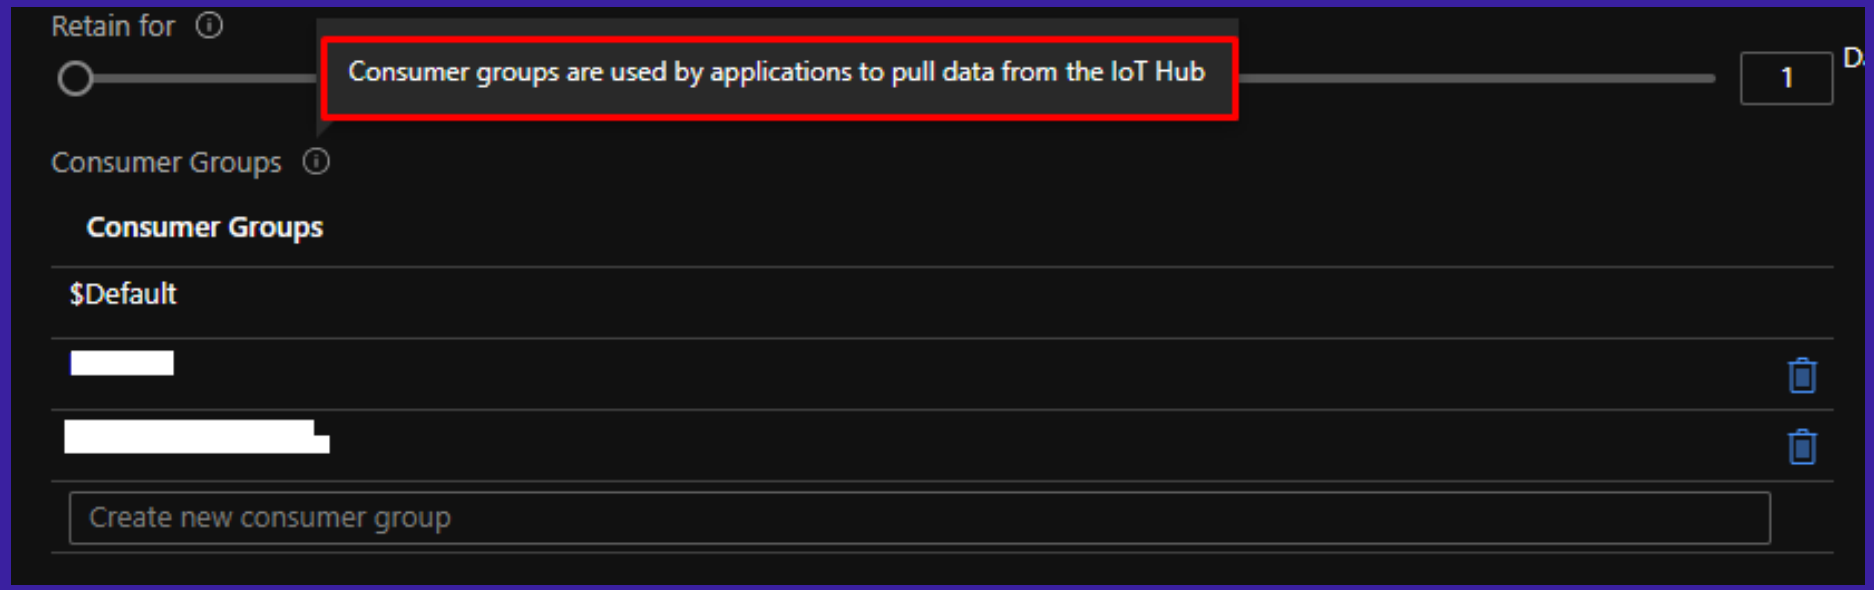
- Cache: 1~7 days
- Transmission (multiple In/Out)
- Unified format
- Unstructured
- Data Centralizing
- 相同事件、相同時間





Consumer Group

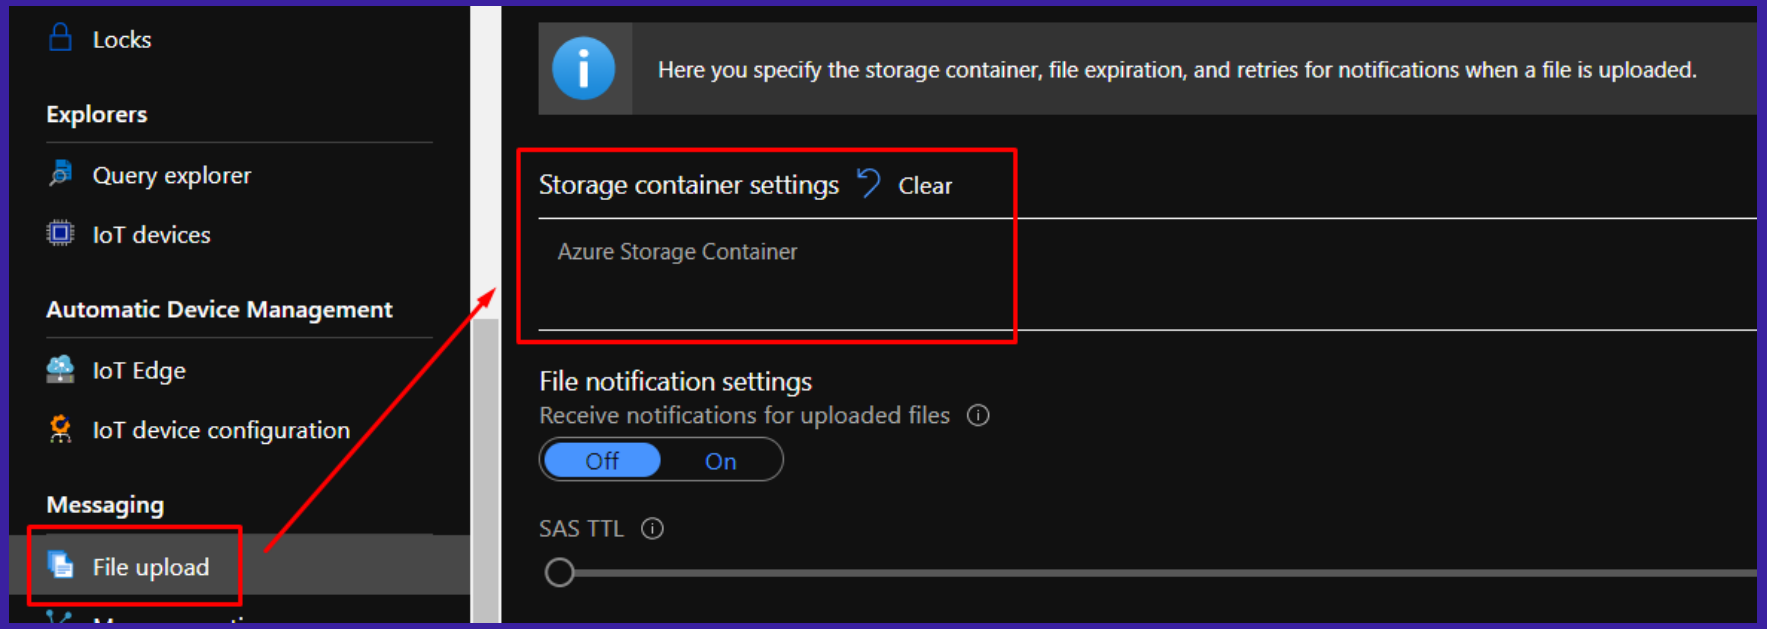
- Pulling data
- Max 20 consumer groups per IoT Hub
- 5 concurrent readers per group



File Upload

- Support Storage Container
- Save message to blob files
- Device每次上傳使用一個Key

- 10 concurrent keys in queue
- **同時10台裝置上傳，超過就會失敗**



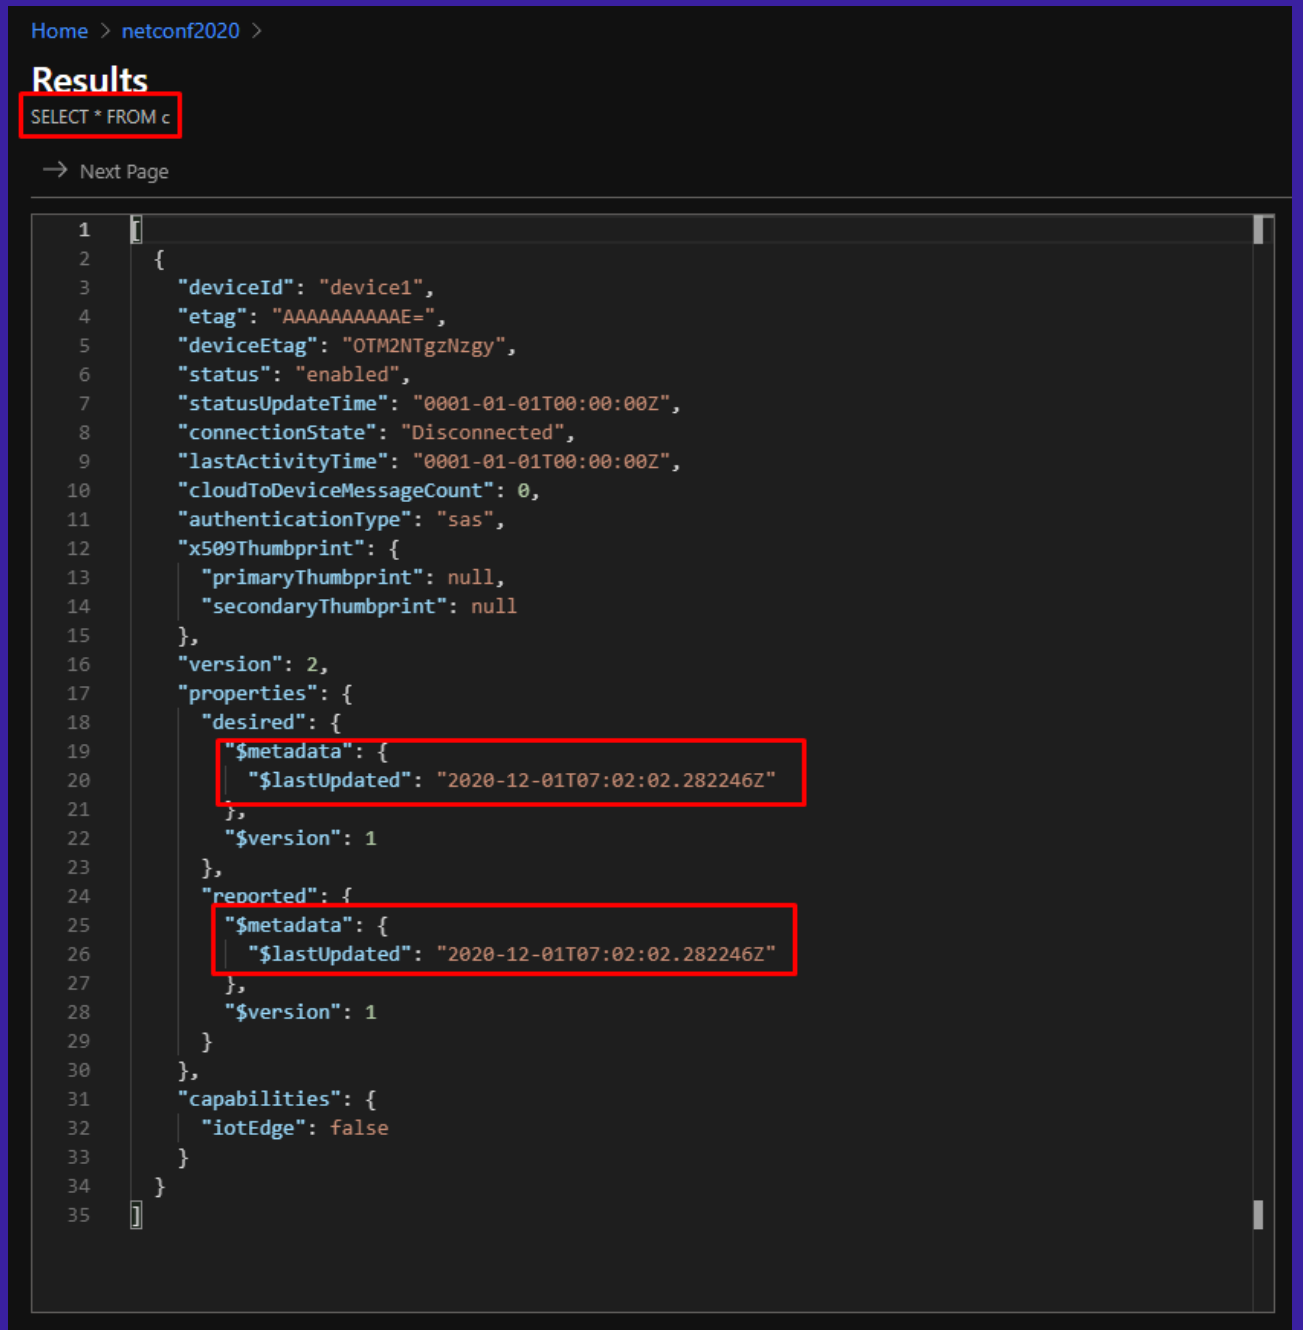
Microsoft STUDY4 Build School

Query Explorer

- Only in Standard Tier
- Device Twins/Jobs

Information, not data

- Help to manage devices



Scale

- Free:
  - Only 1 per subscription
- Basic:
  - Device-to-cloud
- Standard:
  - Cloud-to-device
  - IoT Edge
  - Device Management

Capability	Basic tier	Free/Standard tier
Device-to-cloud telemetry	Yes	Yes
Per-device identity	Yes	Yes
Message routing, message enrichments, and Event Grid integration	Yes	Yes
HTTP, AMQP, and MQTT protocols	Yes	Yes
Device Provisioning Service	Yes	Yes
Monitoring and diagnostics	Yes	Yes
Cloud-to-device messaging		Yes
Device twins, Module twins, and Device management		Yes
Device streams (preview)		Yes
Azure IoT Edge		Yes
IoT Plug and Play		Yes

(Ref: https://docs.microsoft.com/en-us/azure/iot-hub/iot-hub-scaling)

IoT Hub v.s. Event Hub

IoT Capability	IoT Hub standard tier	IoT Hub basic tier	Event Hubs
Device-to-cloud messaging	✓	✓	✓
Protocols: HTTPS, AMQP, AMQP over webSockets	✓	✓	✓
Protocols: MQTT, MQTT over webSockets	✓	✓	
Per-device identity	✓	✓	
File upload from devices	✓	✓	
Device Provisioning Service	✓	✓	
Cloud-to-device messaging	✓		
Device twin and device management	✓		
Device streams (preview)	✓		
IoT Edge	✓		

(Ref: https://docs.microsoft.com/en-us/azure/iot-hub/iot-hub-compare-event-hubs)

SDKs for Client

- C: https://github.com/Azure/azure-iot-sdk-c
- Python: https://github.com/Azure/azure-iot-sdk-python
- Node.js: https://github.com/Azure/azure-iot-sdk-node
- Java: https://github.com/Azure/azure-iot-sdk-java
- .NET: https://github.com/Azure/azure-iot-sdk-csharp

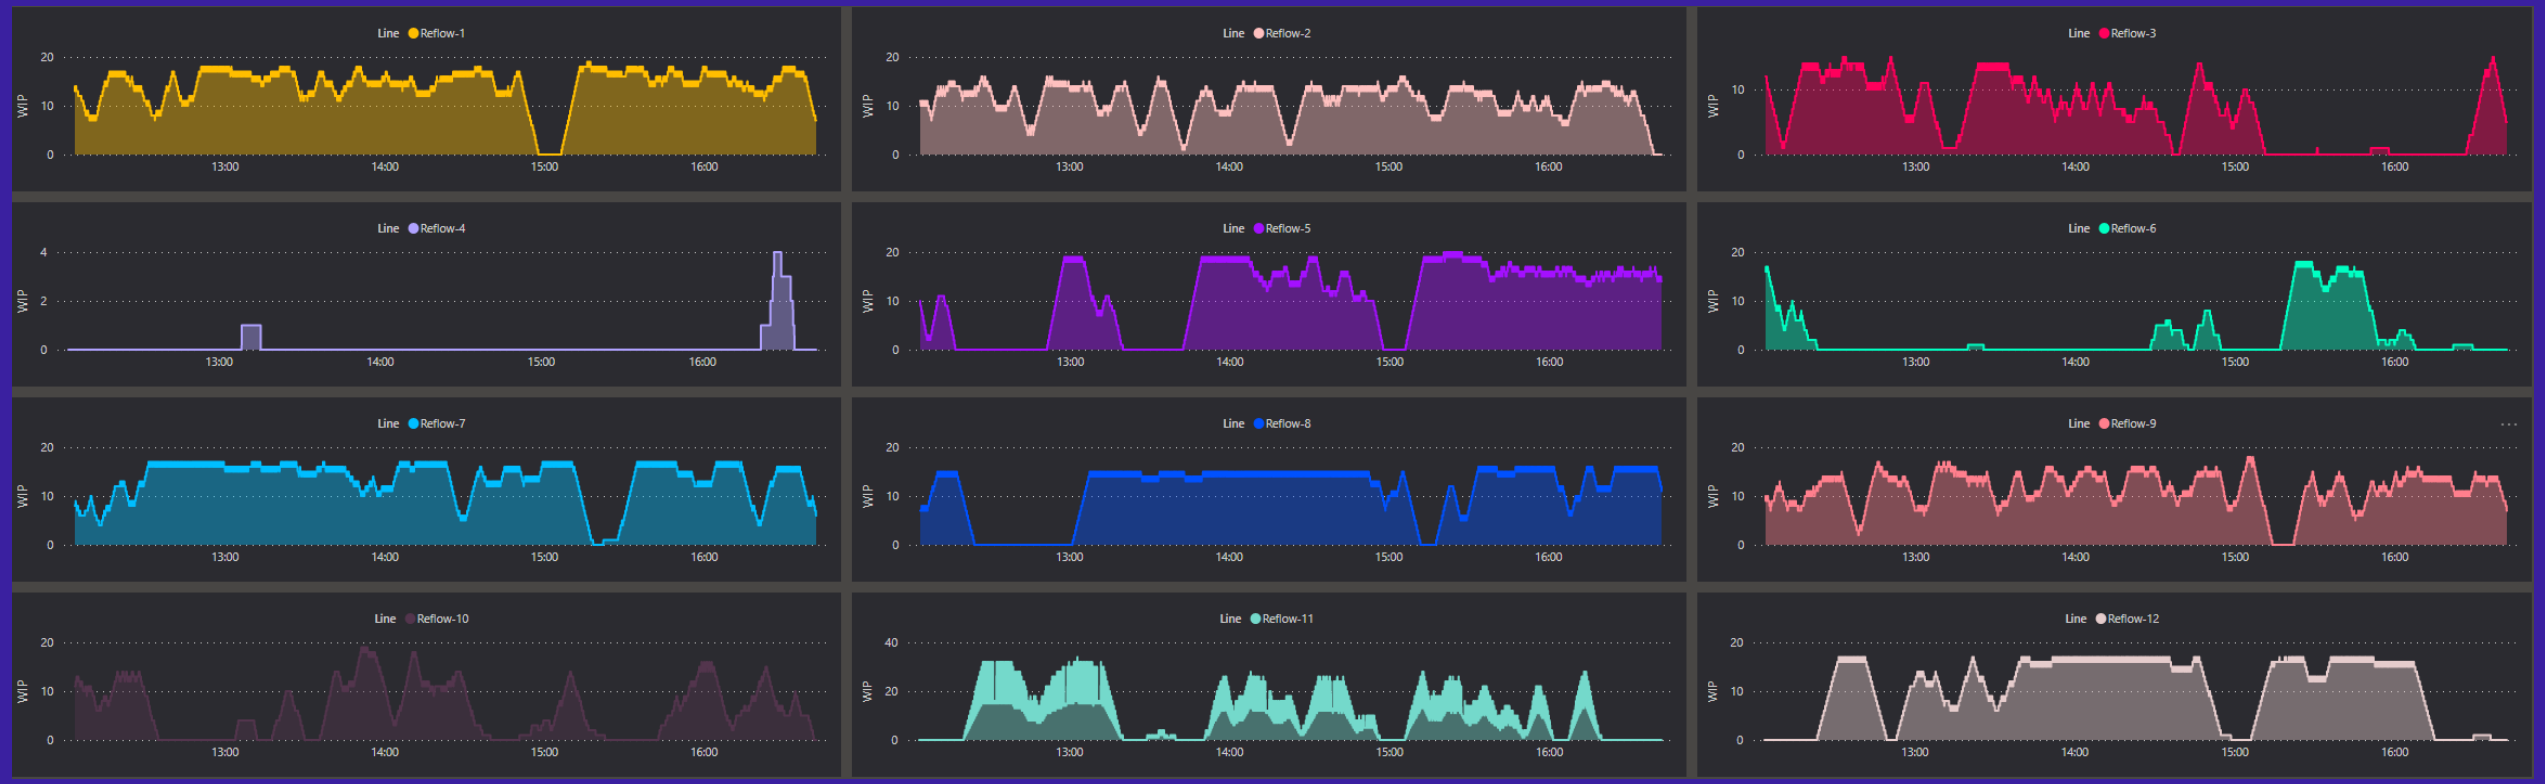
Microsoft STUDY4 Build School

統計 – 以WIP為例



資料從哪裡來?
OCR、Devices、Machine Logs?
我們選擇Machine Logs!

Microsoft STUDY4 Build School

Sources

- Various:
  - Bar Code Scanner:
    - Device Support
    - Weak Integration
  - OCR:
    - Visual Identification Machine
  - Machine Logs:
    - Native Machine Software Support
    - Stable

資料如何處理?

Various Data Structures

- Various Data Schema:
  - Keep useful data
  - Re-organize structure
  - Merge/Divide Values

```
Category,"Auto","1000"CRLF
Name,"MD4NA1X7_270"CRLF
WO,"8785505"CRLF
Amount,"0"CRLF
Action,"Start","1"CRLF
Message,"Program = MD4NA1X7_270"CRLF
Datetime,"5/14/2020 05:44:45"CRLF
User,"ME"CRLF
```

```

```

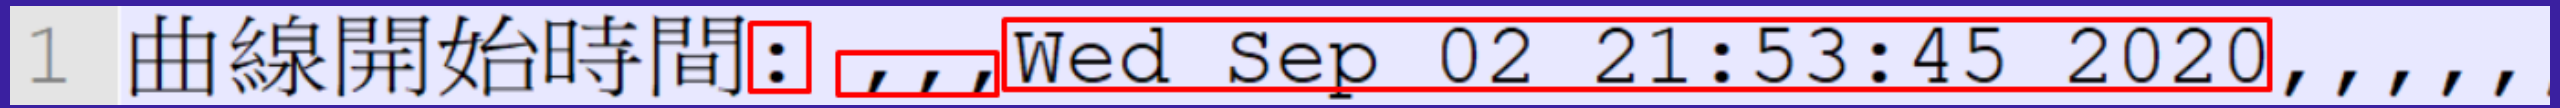
Format

- Not consistent:
  - 欄位分隔符號不一致: 先replace、再Divide
- Abnormal Values:
  - 多個數值: 只留真正的資料
- Value Type:
  - Read with STRING type first



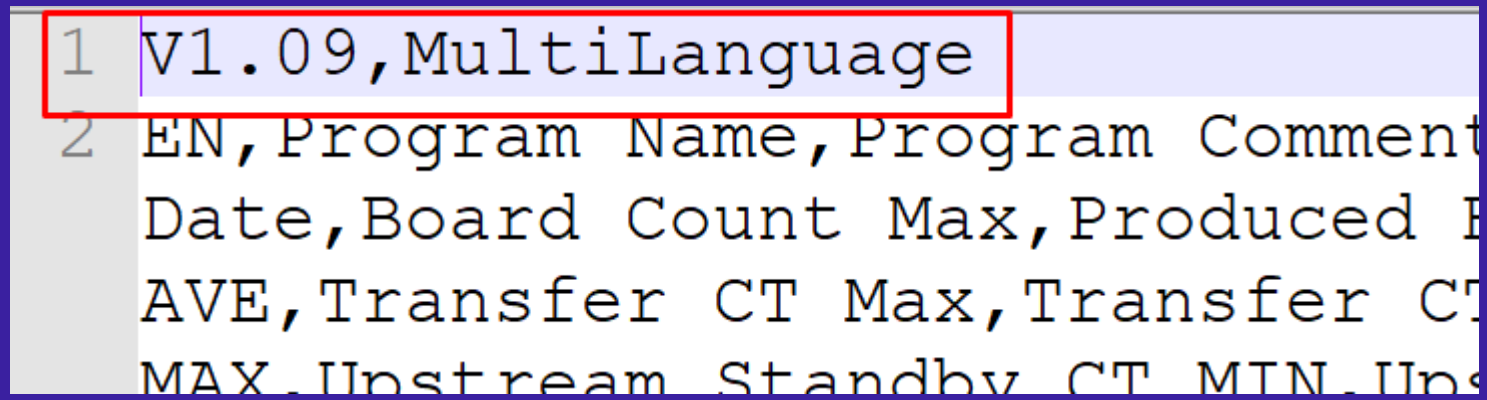
Format

- Multiple columns:
  - Use the column name closed to value
- Hierarchy:
  - Set with real data hierarchy

```
1 Category,"Production","1000"
```

Format

- Extra Information:
  - Remove it
  - Use it on-premises



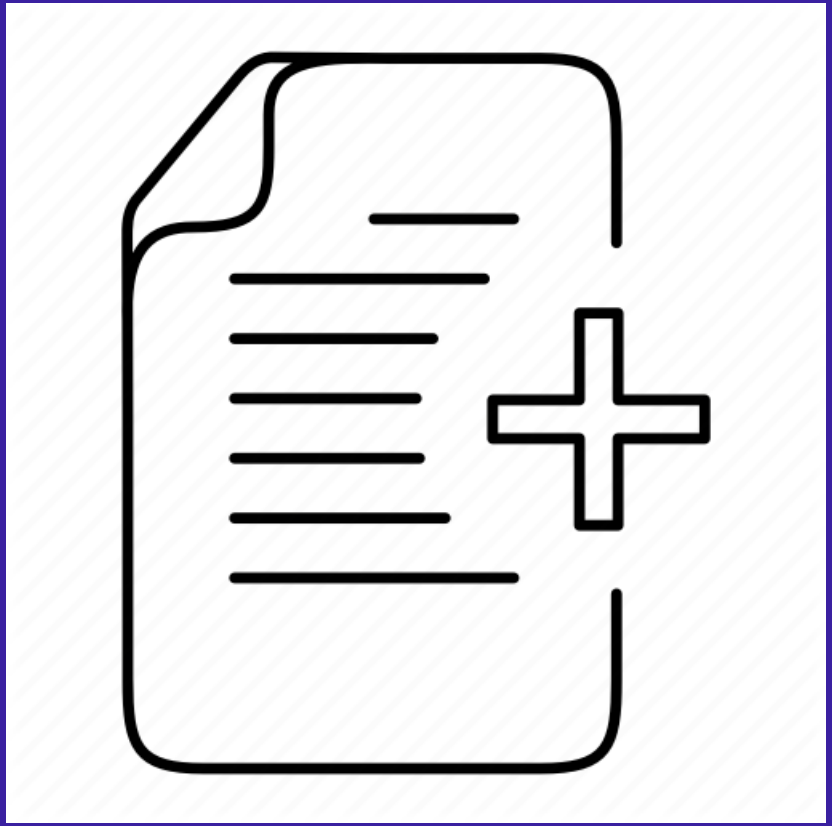
Format

- Column in value:
  - Manually Input
  - Confirm with user
  - Parse Value

```
1  Category,"Auto","1000"CRLF
2  Name,"MD4NA1X7_270"CRLF
3  WO,"8785505"CRLF
4  Amount,"0"CRLF
5  Action,"Start","1"CRLF
6  Message,"Program = MD4NA1X7_270"CRLF
7  Datetime,"5/14/2020 05:44:45"CRLF
8  User,"ME"CRLF
9
```

Frequency

- Scenario:
  1. File Rename:
     - Ex. Test.csv -> Test.tmp
  2. Append data per 1s
  3. File Rename:
     - Ex. Test.tmp –> Test.csv



File Lock/Missing

- Create/Update:
  - Sol:
    - Copying file first
- Delete/Rename
  - Sol:

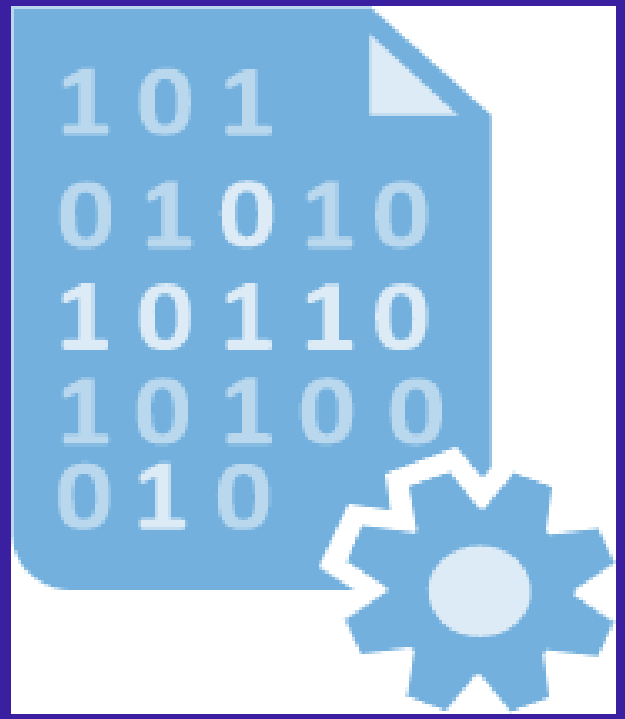
    Filtering by full name(ex. *.csv) then copying
  - Sol:

    Filter by modify time
- **Hint: 不要跟機台比速度!**

優化

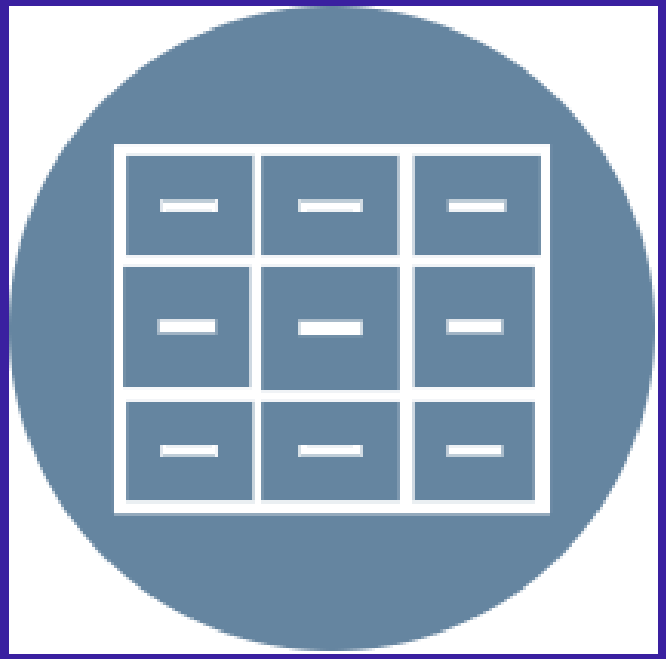
Optimization:

- Create/Update:
  - Create file instead of update, even if only one record
- Delete/ Rename :
  - Not allowed



Read Local File

- Network latency
- Data Size
  - Divide & Conquer
  - 單一檔太大，分開寫檔/讀檔。
- Read/Write Frequency
  - 讀寫檔案速度一定是本地端最快、最穩。
  - 提升Host的I/O效能。



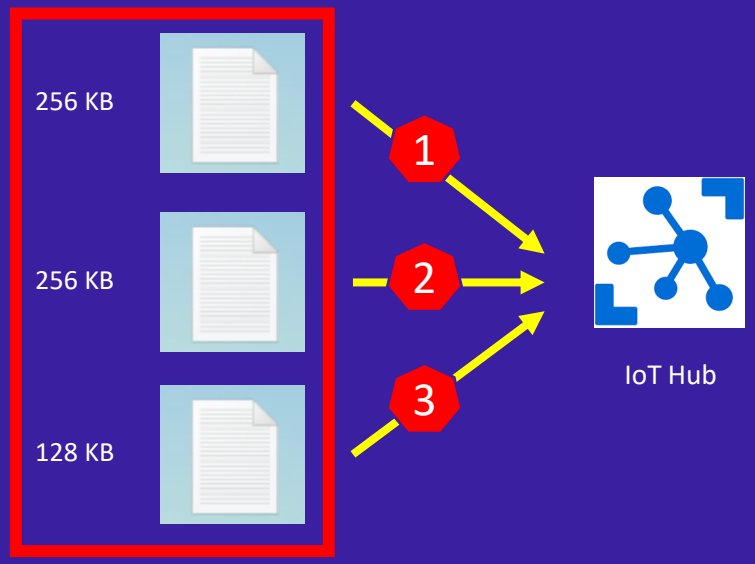
資料往哪裡送?怎麼送?

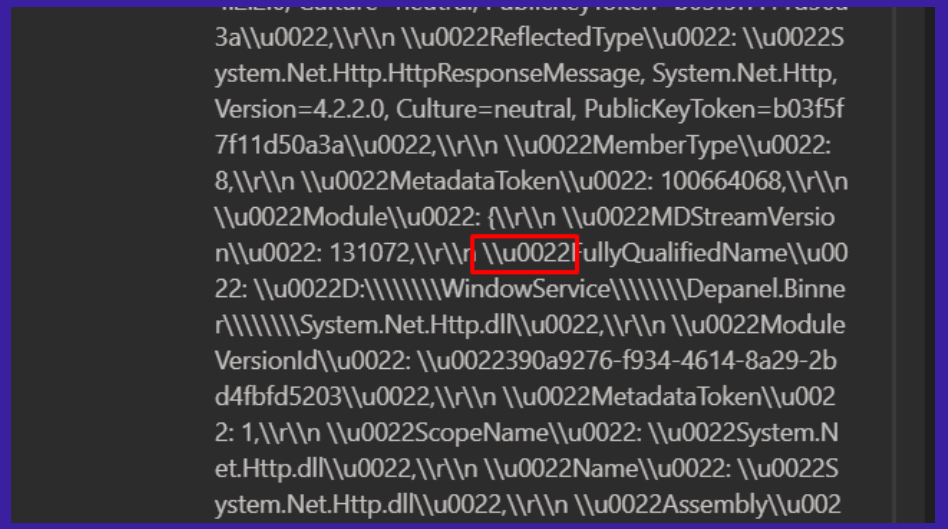
On-premises: DB/REDIS...etc

Cloud: Services?

Principals

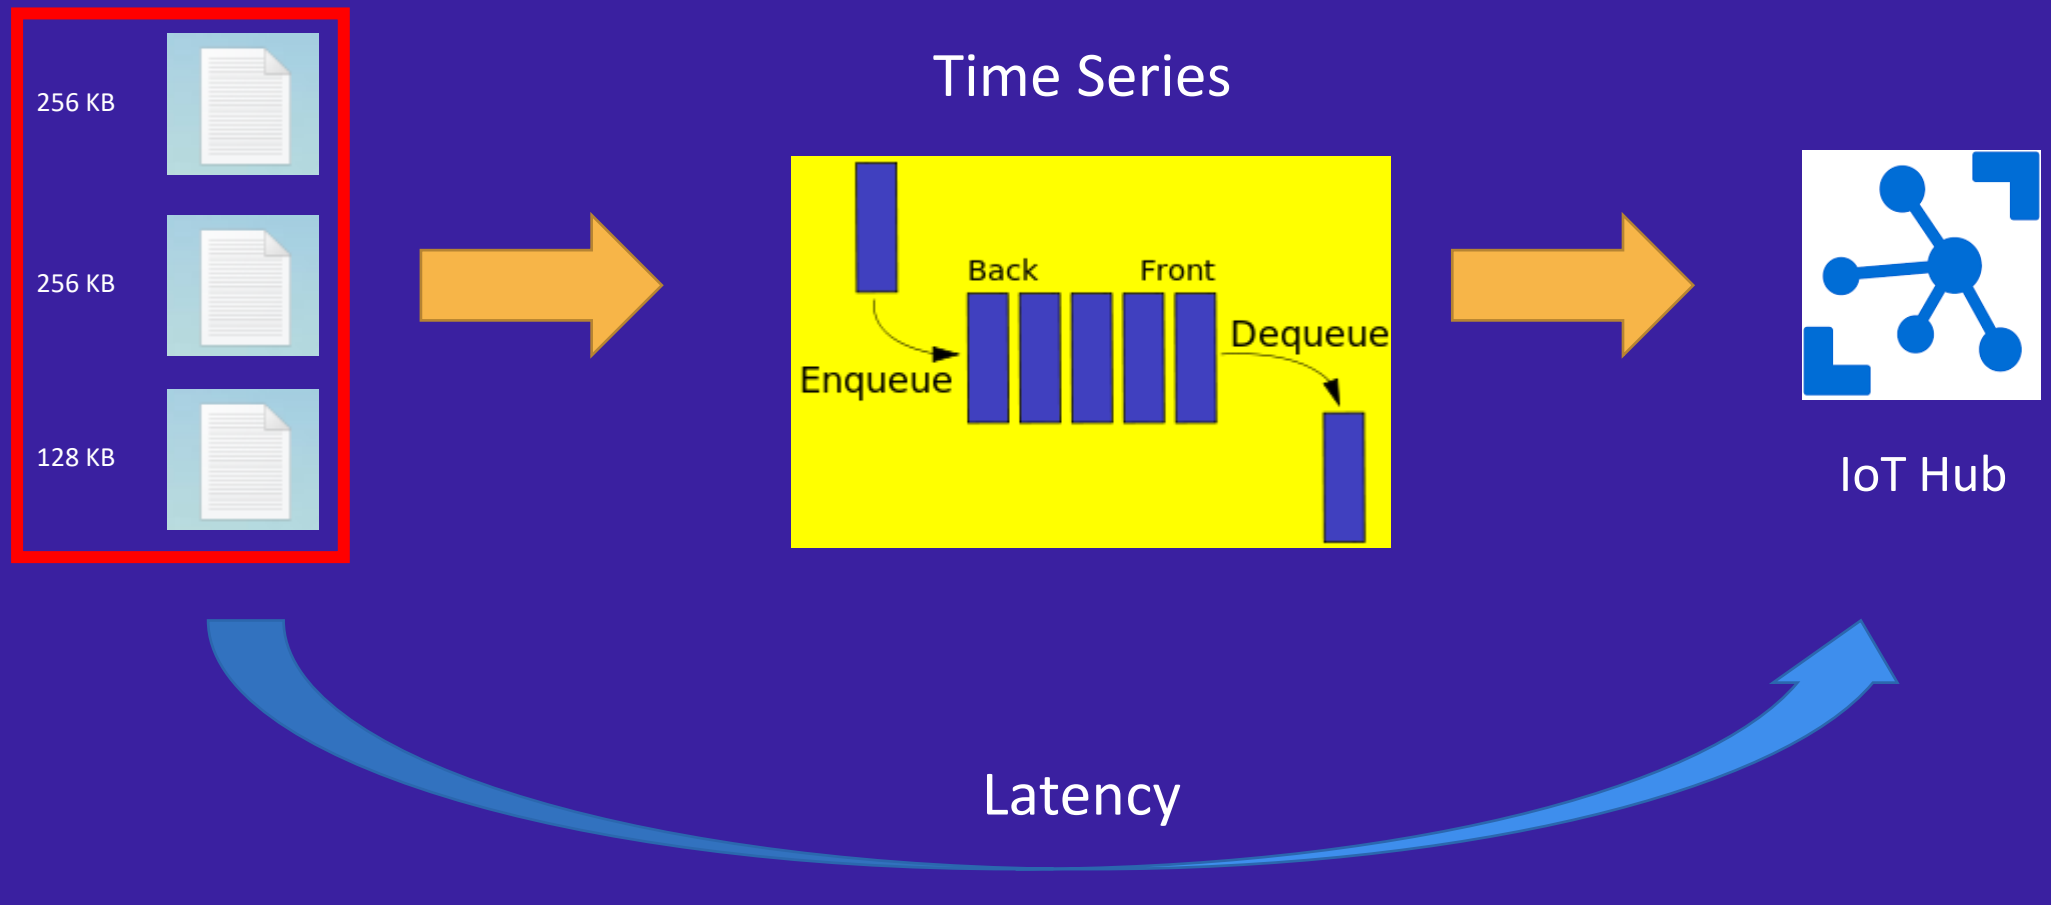
- 256 KB per message
  - Make data size closed to 256 KB in each request
- 4 KB per unit
  - Reduce data size as possible, ex. \u0022





- Data Size:
  - Keep each record size in 4 KB.
- Calculate size by encoding wit UTF-8
  - IoT Hub HTTP message encoding
- Classify:
  - Divide columns into different files

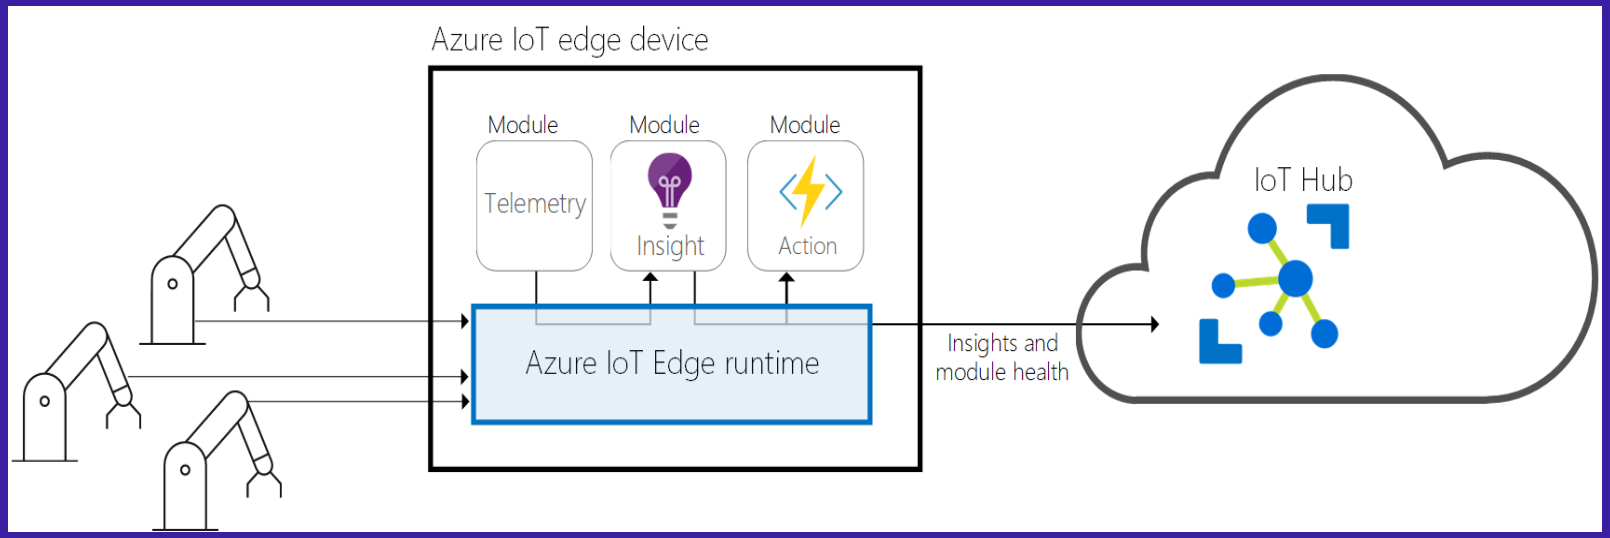
Memory Queue



Application

IoT Edge

- 最接近資料來源的機器
- 分散式計算
- 運算能力
- 網路通訊能力



IoT Device or Edge?

- 政策
- 遠端管理
- 雙向通訊
- Device Client作業環境
- Device Client的網路環境

政策

- 是否允許存取內部資源?
  - Azure IoT Edge提供雲對地軟體更新、Cloud-to-client message...etc
- 網路環境
  - 頻寬(ex. 只允許100/10 MB夠不夠用?)
  - 防火牆
- 軟/硬體設備
  - Edge Server
  - NAS
  - OS

遠端裝置管理

- 軟體更新、大量部署...etc
- Edge端的監控
  - Application Insights
    - 不允許對外通訊
    - 折衷辦法: 定時傳送HeartBeat
    - 中繼站Relay

雙向通訊

- Device to cloud
  - Telemetry遙測資料
- Cloud to device
  - Notification

Device Client作業環境

- Windows/Linux
- Embedded System
- Mobile Device(Android/iOS)

Device Client的網路環境

- 通訊協定
  - https、AMQP、MQTT...etc
- NAT/VPN
- Firewall/Proxy

Services or Container?

- Docker
  - In memory processing，但要注意使用量。
  - Windows環境下，盡可能不使用大量的I/O處理。
    - Windows Container中進行頻繁的File I/O處理時，會造成Memory Leak，且是Non-paged Memory、無法釋放。
- Windows Services
  - 管理不易
  - Debug資訊不充足
  - 系統整合性佳

Microsoft STUDY4 Build School

Cost

Free, Basic or Standard tier?

地區：
東南亞

貨幣:
新台幣 (NT$)

版本類型	每一 IOT 中樞單位的價格 (每月)	每一 IOT 中樞單位的每日訊息總數	訊息計量大小
B1	NT$300.542	400,000	4 KB
B2	NT$1,502.71	6,000,000	4 KB
B3	NT$15,027.10	300,000,000	4 KB

標準層次

版本類型	每一 IOT 中樞單位的價格 (每月)	每一 IOT 中樞單位的每日訊息總數	訊息計量大小
免費	免費	8,000	0.5 KB
S1	NT$751.355	400,000	4 KB
S2	NT$7,513.55	6,000,000	4 KB
S3	NT$75,135.50	300,000,000	4 KB

(Ref:https://azure.microsoft.com/zh-tw/pricing/details/iot-hub/)

Data Volume

- Charge Unit: 4KB
- Batch Daily Volume:
  - Type1: 0.18 KB x 60s x 60m x 24H x 12 Lines = 186,624 KB
  - Type2: 0.98 KB x 60/10s x 60m x 24H x 12 Lines = 101,606 KB
  - Total: 288,230 / 4 KB = 72,057 Units
- Real-time Daily Count:
  - Type1: 60s x 60m x 24H x 12 Lines = 1,036,800 records
  - Type2: 60/10s x 60m x 24H x 12 Lines = 1,036,80 records
  - Total: 1,036,800 + 1,036,80 = 1,140,480 Units

Summary

沒有最好的架構、只有最合適的架構

經驗不是放諸四海皆準的規則、只是借鏡

因地制宜!
